

November 2025 | ISSUE 6

## Workshop follow-up

This email is a **summary of the Workshop led by the OVERWATCH project, held on November 21, 2025, from 10:00 am to 1:00 pm CET, titled:**

*“Implementation of new technologies in operational activities of crisis management and civil protection services. AI, Drones, and Satellites for Real-Time Situational Awareness in Disaster Response”*

Through the following **\*LINK\*** you can watch the full workshop recording and download the agenda as well as all speaker presentations in PDF format.

The workshop provided a unique opportunity to engage with a network of EU projects at the forefront of innovation in emergency management. Participants gained insights into emerging technologies such as AI, drones, and satellites-tools that are transforming real-time situational awareness and disaster response. These solutions are being developed to better address the increasingly complex disaster scenarios facing Europe in the future.

We would like to thank everyone who contributed to the organization of the event (especially CMINE), the projects involved (UNICORN, COLLARIS2, DIREKTION), and all participants for their interest and engagement.
